

Weston Solutions Capabilities

Weston has remained steadfast in its pursuit of timely, client-focused solutions that are more resilient and sustainable for future generations. We're united in protecting our infrastructure, combating climate change, and ultimately, preserving our planet. We're committed to performing meaningful work that benefits both the environment and our communities because our clients and colleagues have come to expect nothing less than **trust, performance, people.**

Why Weston?

- **Technical Expertise:** We will leverage our 65-years of professional expertise in environmental compliance, engineering, occupational safety, fuels, wastewater, and industrial hygiene services.
- **A Diverse, Integrated Team:** Weston's Team has proven, reliable, environmental professionals and team partner resources who are readily available to support in a timely manner.
- **Exceptional Safety & Compliance Record:** Safety is a core value at Weston. All employees carefully monitor work to prevent incidents and proactively manage hazards. Our Experience Modification Rate is 0.84, below the industry average of 1.0.
- **Efficient Project Delivery:** We use automated tools and systems to effectively manage multiple projects concurrently, and at regional locations. Our program objectives focus on compliance work safety, quality, cost, and schedule.

FUELING SYSTEMS

As industry leaders in fuels system design, construction, facility maintenance and minor repairs, and API tank rehabilitation, our clients look to us to help modernize their fuel storage and distribution systems. We consider the entire life cycle of a fuel system to minimize expensive repairs or costly replacements that create waste. We take a total-process approach to critical systems to address potential challenges before they occur and reduce the need for inefficient change orders.

You benefit from our culture of knowledge-sharing. Our close team of employee-owners nationwide share expertise and best practices to view your project from every angle. And emerging leaders at Weston learn from this process so we sustain a legacy of safe fueling system operations. Our engineers, technicians, and site superintendents have API 653, 570, and 510 and STI-SP001 certifications.

WASTEWATER MANAGEMENT

Weston designs wastewater treatment systems that leverage the beneficial uses of wastewater, thereby generating opportunities that provide demonstrable environmental stewardship. Our solutions are designed to meet EPA, state, and local requirements that are integrated at the very beginning, ensuring compliant and frictionless delivery. Weston's utilization of machine learning and remote monitoring allows clients to collect and analyze data to confidently design and validate operations and maintenance programs.

Our team is devoted to gaining and sharing new knowledge about revolutionary technologies for wastewater treatment and conveyance systems. This ensures our client work represents the most effective and state-of-the-art approaches to biosolids capture, nutrient removal, PFAS, petroleum removal, and other emerging contaminants treatment.

ENVIRONMENTAL SOLUTIONS

Protecting the environment and supporting our clients is part of Weston's core competency, company values, and employee-owners' passion. Weston has been a pioneer and continuous innovator in the development of remediation processes and technologies, including:

- PFAS sampling, analysis, and treatment protocols
- Early adopter and the largest investor in Advanced Geophysical Classification technology
- Leader in High-Resolution Site Characterization for comprehensive Conceptual Site Models (CSMs)
- Integration of Enterprise Geospatial information to provide robust 3D visualizations, real-time investigation results coordination, and expedited decision-making
